

## Customer Information

### Product Adjustment Printing PowerTOP® Xtra Plugs and Connectors

Dear Customers and Partners,

We would like to inform you about a product adjustment to our PowerTOP® Xtra plugs and connectors in the current ratings 60/63 A and 100/125 A.

#### Description of the change

In the future, the “PowerTOP® Xtra” lettering on the grey hard component of the housing cap will be removed.

#### Previous design:

The “PowerTOP® Xtra” lettering was printed on the housing caps of the plugs and connectors.

#### New design:

The housing caps of the plugs and connectors will be supplied without this lettering.

### **Reasons for the adjustment**

With this change, we aim to further optimize our products and manufacturing processes:

- Increased process stability in production
- Improved sustainability by eliminating printing ink
- Enhanced product consistency, as any potential variations in the print image are fully eliminated

### **Impact on the Product**

This adjustment is explicitly a purely visual change. There are no changes or limitations for you as user:

- Technical properties remain unchanged
- Functionality and handling remain unchanged
- Materials used remain identical
- Article numbers and specifications remain unchanged

The proven quality, safety, and performance of PowerTOP® Xtra plugs and connectors remain fully unchanged.

### **Implementation**

The change will be introduced gradually. During the transition period, products with and without printed lettering may be delivered.

All product variants in the 60 A, 63 A, 100 A, and 125 A ranges are affected, regardless of the number of poles and clock position.

Thank you for your trust and understanding.

If you have any questions, please do not hesitate to contact us.

Yours sincerely,  
Your MENNEKES team
